

Protective cover

Accessory for AAV anti-freeze valve

Example of mounting covers on AAV

FOR
MONOBLOCK
HEAT
PUMPS

PROTECTION
AGAINST
DIRT

NEW

Construction

UNIQUE SHAPE

The downward-facing air inlet protects the aeration valve against rain, snow and hail, minimising the risk of air supply blockage during AAV operation

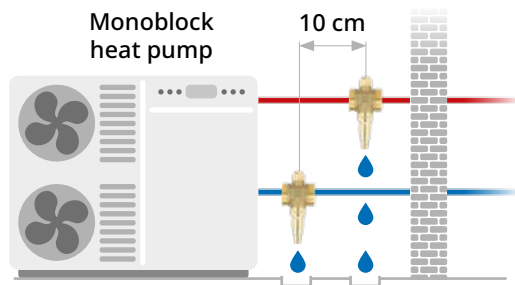

SEALING RING

Fitted with a seal, it ensures an airtight connection between the valve and the cover

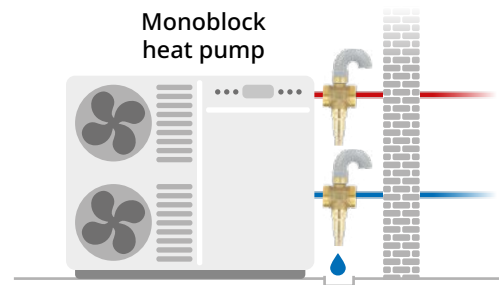

FILTER MESH

Protects against dirt such as sand, dust, leaves or insects entering the air inlet of the aeration valve

Application diagrams

We recommend maintaining a distance of 20 cm between the valve and the ground and at least 10 cm between valves.

In situations where space is limited, the protective cover safeguards the valve, allowing them to be stacked on top of one another.

Selection table

Art. No.	Name	Connection	Kvs	EAN
17 000 04	Protective cover, accessory for AAV anti-freeze valve	-	-	5902510014759
